

## 2GHz Relocation Project

### Extending the Construction Period for your BAS License

If the FCC build-out date, 18 months from the initial grant date of the application, is approaching for your station's modification application to add digital operations and your station is not ready to transition to the new band plan you must file an extension request with the FCC to keep the application active. This extension request should explain that the application was filed in order to comply with the transition of the 1990-2025 MHz band from the Broadcast Auxiliary Service to emerging technologies but your TV market or your station is not ready to transition and, therefore, you need Commission permission to extend the construction period. If your application contains any frequency bands other than 1990-2110 MHz it is critical that you include these frequency bands in your extension request. You should state that these other frequency bands are part of an integrated system and that these frequencies will be reported constructed along with the 1990-2110 MHz frequencies when the TV market or station is transitioned. If you do not explain that frequency bands other than 1990-2110 MHz are part of an integrated system, your application may be dismissed.
